

EDISCOVERY

Artificial Intelligence Applied.

Trustpoint is at the forefront of the AI revolution. We specialize in AI enhanced workflows that address the reality of today's ever expanding data landscape.

AI solutions from TrustpointOne apply to all phases of eDiscovery. From early case assessment through document review, our AI workflows streamline each process to make eDiscovery more efficient and cost effective.

Early Case Assessment

Accelerate understanding through AI-driven insights. With the latest machine learning technologies, enhance your legal team's understanding of your data before review.

Data Management

We manage, process and store client data for review and production on best-of-breed eDiscovery processing and review platforms.

Digital Forensics

Trustpoint preserves, collects, investigates and analyzes even the newest data sources with a customized and minimally invasive approach.

Document Review

Trustpoint provides managed document review augmented with Artificial Intelligence. Using a multi-modal methodology, our workflow achieves better results at a lower cost.

AI designed for eDiscovery.

Get there faster & understand more. AI in eDiscovery is all about making order out of chaos. It's about reducing huge volumes of data into clear, finite, and actionable items.

1. Find Key Evidence

Reveal supporting and adverse evidence after reviewing as few as 1000 documents.

2. Identify Custodians

Find out who is communicating with whom, how often, and about what. Identify potential custodians of interest based on actions with already identified custodians.

3. Identify Subjects

Our experts use NexLP's prebuilt AI models and active learning tools to identify big-picture categories and granular topics of conversations.

4. Train TAR Engine

With better examples and a Continuous Active Learning TAR method, quickly train the TAR engine for review.

5. Search Term Analysis

Conduct more effective search term negotiations or challenge the completeness of your opponent's production with our search term analysis.

6. Document Review

Review documents more efficiently by using concepts and relevance already classified and identified by the AI systems.

Choose us for your most complex cases

Our clients face dynamic and evolving legal and data landscapes. With increasing data volumes and data sources, complying with burdensome discovery requests can be complex. This is where Trustpoint excels. We help clients avoid discovery pitfalls and target the important data so they can focus on the merits of their case.

Growing data needs AI

The exponential growth of data requires a new approach to discovery. Data has gone from residing in a handful of sources to residing in a staggering number of locations. Our expert teams and AI workflows manage the extraction, processing and preservation of all your data, no matter where it resides.
