

Slack, Teams, Texts & More

We've been handling the data from collaboration tools for years. Now we've built a tool that makes it easy.

An App to Integrate Apps

Trustpoint has developed a new Relativity App for integrating collaboration data. It works with Slack, Teams, Text Messages, What's App, Hangouts, and more. Basically any method that companies (or individuals) use to communicate can be seamlessly integrated into your Relativity environment.

Your Data Your Way

It's all about control and customization. Every ESI requirement is different and our tool was designed with this in mind. Because our solution is meta-data aware, you'll have complete control over sorting and filtering information. You can view and group your data in any way that makes sense for your case. And with our AI integration, identifying key material is faster and more efficient than ever.

Robust Filtering

Sort your data by date, channel, user, keyword, attachment or recipient.

AI Integration

Locate what matters faster. All collaboration data is integrated into our AI technology.

Dynamic Processing

Lightning fast processing because we don't use looped data.

Assign Groups

Review your data by grouping together in the way that makes the most sense for you.

Export Anywhere

Export into RSMF, PDF, mHTML, or traditional eDiscovery format.

Clear, Easy Formatting

Data is only as good as your ability to use it. Everything in our collaboration tool is designed with this in mind. With clear presentation and straightforward commands, you can view all your text, chat and images in context. Easily sort, group, search, and filter by user, keyword, attachment, and more.

Customized, As Always

We don't just hand you a piece of software and call it a day. At Trustpoint, our service is every bit as customizable as our software. We'll work with you to set up the right process with the right training to make sure your case runs as smoothly as possible. Basically, our job is to make your job easier.

Text Display Options in Relativity

Using our proprietary collaboration tool, you can display text messages in a variety of formats.

View in PDF Format for a visually accurate display of text conversations in context. View full conversation, by day, or by message.

Use *Relativity Short Message Format* (RSMF) for each conversation to be split up as one message per document.

Use RSMF to display full conversation with timeline report.

Use RSMF to display conversation per day.
