

eDISCOVERY & REVIEW

Construction Litigation

During construction litigation, eDiscovery & Review can be intensive - with multiple parties, complex contracts, and diverse, high volumes of data occurring over long periods of time.

Built for This

Modern construction litigation, with its tangle of communication and overlapping interests, requires advanced data techniques to properly sort and find key evidence. It's precisely these environments in which Trustpoint excels. With advanced Ai and data expertise - we're literally built for this.

Unmatched Efficiency

From contracts & plans to meeting minutes, site logs & emails, construction projects produce vast amounts of ESI. This can become expensive during document review. Fortunately, our combination of advanced AI & human expertise allows us to perform data analysis and document review with incredible efficiency, speed, and accuracy. This often results in six figure cost savings in a single case.

A Specialized Team

We'll staff your review with a team of specialists with construction experience.

Save 30% on Review

Our process typically achieves a thirty to forty percent increase in efficiency.

Rapid Response & Resolution

Built with agile project management, we aim for a response time of less than 5 minutes.

Partnership Approach

Our whole philosophy is to work backwards from a smiling customer. It's as simple as that.
