

A Document Review Dead-End

Too much to review. Too much time & money spent. Too few results. Now what?

The Challenge:

Outside counsel for a Fortune 10 company spent over 11,000 hours on a months-long review of 500,000 documents – and found only 11 hot documents. Since each found document was absolutely critical to the case, it was essential to find the rest.

The Solution:

Since all traditional search methods had been unsuccessful, counsel brought in Trustpoint's AI team. At first, the firm asked Trustpoint to continue with their default platform, so we tried threading, near duplicate analysis, domain parsing, and structured analytics. Unfortunately, these techniques also proved unsuccessful.

Having exhausted every other possibility, The firm finally allowed Trustpoint to unleash the full EvidenceOne Ai workflow. We moved the project over to NexLP, and after a few days prep, we began. On day one, we found 3 new hot docs. Ten days later, having found the remaining 19 hot docs and re-analyzed all 500,000 documents, we were finished.

FASTER: All 500,000 documents re-analyzed in just 10 days.

BETTER: 19 additional hot docs were found, **a 172% increase.**

MORE EFFICIENT: Counsel had spent over 1,000 hours per hot doc. We spent 1.57, or **636% more efficient.**

MORE RELIABLE: We delivered more accurate and defensible production sets and privilege logs covering all documents.
