

Redaction Just Got Easier.

Introducing Exolution

Exolution is feature-rich, extremely fast, and easy to use. By leveraging Exolution, clients have experienced more than a 90% reduction in redaction costs.

Exolution empowers you to quickly search and redact millions of values in minutes while mitigating your risk of releasing sensitive data.

Find More

Discover invisible and hidden data that traditional methods can't.

Data Location Awareness

Pinpoint and jump to responsive values in simple clicks, enabling quick review and redaction QC.

Perform Millions of Redactions in Minutes

Search and redact millions of values across large document collections in minutes

Feature-rich, extremely fast, and easy to use.

Exposes Hidden and Protected Contents

Reduce the chances of spoliation of critical, password protected, or invisible content. Automatically remove internal passwords to make all data visible, identify data located beyond the page boundary or cell display limits, and find invisible data with the same text and background colors.

Search and Instantly Redact

Forget slow and unpredictable auto redaction batches that keep running forever. Instead, run a document level or global search in Exolution, review the results, and then make millions on redactions in minutes.

Advanced Features to Handle Spreadsheets

Spreadsheet documents are uniquely complex which makes it difficult to review and redact. Exolution is jam-packed with many advanced features to handle a large number of spreadsheet documents efficiently.

- Automatically unhide all hidden rows, columns, sheets, and very-hidden sheets including password-protected sheets by removing internal passwords
- Filter rows just like in MS Excel and mass redact
- Identify duplicate sheets across non-duplicate documents, or visually similar sheets, and redact. Exolution even has spreadsheet documents threading
- Save reviewers from missing scattered data from remote rows and columns by hiding consecutive empty rows and columns
- Comprehensive inverse redaction options at sheet and file levels

Redaction Collision Detection

Integrated redaction collision detection prevents overlapping redactions and redacts only the unredacted portion.

Large File Support

Display, search and redact up to 1.5GB sized files natively without a need to download or render to images.

Color-Coded and Point-n-Click Redactions

Easily create and locate redactions by associating redaction types with colors. Select an area or object to be redacted and add or remove redactions with a mouse click.

Innovative PII Explorer

The PII Explorer can redact millions of PII values in a few clicks. Identify major bank card numbers, SSNs and birth dates or add your own custom PII types, keywords or regular expressions.

Real-time Redaction Propagation

Redact all duplicates in real-time without any extra step.

Pseudonymize

Keep entity-relationship visible while removing actual values.
