

OpenAxes Partnership

A comprehensive suite of software and consulting solutions to drive and assist organizations in meeting data privacy, security, and compliance needs.

Data Mapping

Data Mapping is the first step an organization takes towards developing a privacy program. Trustpoint.One and OpenAxes have developed a data mapping process that allows an organization to uncover what data it has, where it is located, how it is being used, and who has access to it. This information is what determines both an organization's risk profile and the appropriate data policy.

Public Records Requests

Freedom of Information (FOIA) & Public Records Requests (PRRs) are ongoing investigative actions that require government agencies and departments must respond to within a reasonable time. The requests may come from multiple sources and be tricky to execute without a proper compliance plan. Without an adequate plan in place it can be difficult to respond in time, which can create liability and risk for the agency.

Privacy & Automation

Data Subject Access Requests (DSARs) and Deletion Requests for GDPR, CCPA, & CPRA, are reactive business processes that can be tricky to navigate without a proper governance, risk & compliance plan. We have developed a five step process to analyze an organization's data, identify all its locations, and implement an automated, time saving response.

Legal Hold Requests

OpenAxes Legal Hold allows you to meet your legal obligations when you reasonably anticipate litigation in a straightforward, easy-to-use workflow. This includes time-saving features to help track complex matters with customizable notification, and questionnaire templates and auto-reminders to custodians with audit trail tracking and reporting.
